		ALL	OWABL	E FLOWS	S	MAX		FLOW (GPM)					

Master water mixing valve shall be of the thermostatic type with liquid-filled thermal motor. It shall have lead free brass body construction with replaceable corrosion-resistant components. Valve construction shall employ a sliding piston control mechanism. Sliding piston and liner shall be of stainless steel material. Valve shall come equipped with union end stop and check inlets with removable stainless steel strainers. Valve shall control temperature from a low flow of 1 GPM* up to a maximum flow rate for a given pressure differential. Valve shall provide protection against hot or cold supply line failure and thermostat failure.

Unit includes a dial thermometer and shut-off valve on tempered water outlet. Unit is assembled and tested with necessary fittings and nipples. Unit includes dual outlet piping. Cabinet is shipped separately.

FINISH:	Brass Rough Chro Other	ome			
TEMP. RAN 70° to 100 90° to 120 110° to 140 Special	°F °F	SET POINT 80°F 110°F 130°F			
Optional Test Connection Including garden hose connection, shut-off and thermometer. Brass Rough Chrome					

CABINET SPECIFICATIONS:

---- MIN

Body: 18 Ga. 16 Ga.
Door: 18 Ga. 16 Ga.

Material: Type 304 with Baked enamel painted No. 4 Finish

TYPE OF CABINET MATERIAL

Recessed Stainless Semi-Recessed Carbon Steel Carbon Steel Surface Carbon Steel Box, Stainless Door

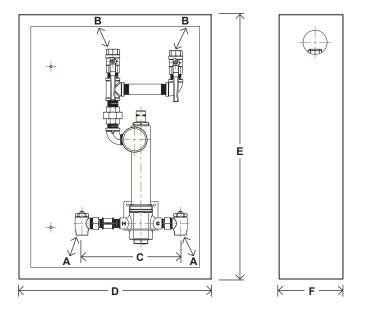

Cabinet includes lock with two keys. Hinged left side, piano type. For specifications on security cabinets, contact factory.

Dimensions are for reference purposes only. For rough-in dimensions please refer to Lawler's Revit/BIM models found at temperedwater.com.

Model 801 Eng. No. 86579

Typical Installation

Install the mixing valve below the hot water tank or heater. If this is not possible, pipe in a heat trap as shown in Figure 1 with an approximate 2' drop.

Connect a tempered water return line as shown in Figure 1. This allows flow through both ports of the mixing valve during periods of no draw.

If a dual temperature system is used, a separate recirculating loop and pump are required to return high temperature hot water to the water heater. See Figure 2.

Install an aquastat at the tempered water return pump.

Install the water heater per manufacturer's instructions.
